Primer is notable for its extremely low budget, experimental plot structure, philosophical overtones, and. While all of Primer's focus was on telling a story that made sense, there were a few key moments that really stood out. They include, for example, an episode about a father and son who are in completely different situations: a father working for an unsatisfying corporation and a son trying to get the

Dexmedetomidine-associated bradycardia in newborns. Dexmedetomidine is an alpha<sub>2</sub>-agonist which has been used as an anesthetic agent in the pediatric population. It has been utilized for sedation of both preoperative and postoperative patients. Its use in newborns has also been recently reported. We present two cases of dexmedetomidine-associated bradycardia in newborn infants. In a previously reported case of bradycardia, beta-blockers were administered. Our cases were treated successfully with the same therapy without bradycardia recurrence.

This application is a national stage application of international application PCT/FR98/02456, filed Oct. 16, 1998, which was published in the English language. The entire contents of that international application are herein incorporated by reference. A process for preparing isoxazole derivatives comprises the reaction of a sulfonamide intermediate with an acylating agent and a reducing agent. One form of the sulfonamide intermediate comprises sulfonamide phenols and their salts. This process suffers from the

disadvantage of providing mixtures of xcex1-hydroxy-xcex2-amino sulfonamide compounds (X1, X2) when reacting the sulfonamide with an acylating agent and a reducing agent. The examples illustrate the formation of a 75/25 molar ratio of (X1, X2) product. It has now been discovered that if a sulfonamide intermediate having a substituent on a phenolic position is reacted with an acylating agent and a reducing agent, and if the sulfonamide is in the form of an acid addition salt, the phenolic position of the intermediate is substantially free of acidic contamination, and substantially free of xcex2-hydroxy c6a93da74d
